

# Deco Panels *Creativity beyond limits*

# Partition Decoration and Beauty of the **LIVING SPACE**

## Decorative Panels

Dedicated to architectural and design projects in office areas, also commercial and residential, the **Deco Panels** line is unique yet comfortable because it allows us to be creative without limits and to work closely with our partners in a dynamic and guided manner of bolder visions.

We've been doing this since 2005, highlighting the beauty and functionality of wood and transforming the spaces we work with into more welcoming places, more interesting, more remarkable.

**Decorative Panels** are a concept dedicated to interior and architectural design projects for the office, commercial and residential areas that involve state-of-the-art technological equipment.

**Decorative Panels:** an ideal aesthetic solution for partitions, spectacular railings, surface claddings, hiding or separating spaces or objects. For both INTERIOR and OUTDOOR. Decorative Panels can also be used for outdoor designs for gardens or building facades, using materials resistant to the weather.

# The Wood

Emotional Perspective

Wood is heat, vibration and life. One of the most versatile materials that nature has given to man, the wood can be processed into a lot of shapes and structures, depending on the essence and its peculiarities. When it is combined with other building materials, the wood brings out the true meaning of "home" - of the place to which we belong.

Regardless of whether we deal with decorative ventilated facades, wall claddings, decorative or acoustic panels, or decorative masks for radiators or air conditioning systems or railings - every project is important and special for us, that is why we are always looking the most innovative and creative solutions for the "problem" of the customer.

# The Metal

Modern Perspective

***"Innovation is not just about creating a unique product. We believe that innovation applies into all stages of development and in all production processes so that the result reflects the passion and dedication of the creator."***

*Andrei Constantinescu - founder of BD Lemntech*

# WE are

## 01. Dedicated

We are constantly involved in developing projects that have as a structural basis the WOOD, but also any other materials suitable for the project. Our teams of engineers, designers and qualified operators provide high quality services for the implementation of your most creative ideas.

At the **Decorative Panels Division** we operate with top technology and we are ready to make any type and any number of panels to the highest standards of quality, but also keeping at the lowest prices on the market. With a production area of over 10,000 sqm, with high-performance equipment, we can find quickly the best way to fulfill the most sophisticated projects. From Design and Production, to Delivery, the process is easy and efficient. With more than 15 years experience in the market, we guarantee both quality of the final product, as well as the satisfaction of our customers.

## 02. Principles guided

We are guided by a set of simple principles and we believe that appropriate behavior brings an added value to the Team, with positive results.

**Safety:** We take care that every Person in the Team can return home as he came to work: in safety.

**Debt:** We meet our obligations on time, aware of our daily mission.

**Honor:** We have high standards of conduct in life.

**Integrity:** We fulfill every promise made. The given word is the basis of our relationship with any Client. We build trust.

**Courage:** We choose the right, but hard way, instead of the light way but superficial.

## 03. Careful

At the **Decorative Panels Division** we respect the Environment. Regardless of the requirements of the projects we carry out, we make sure that we protect the Environment through the optimal use of resources. Thus, we use as much as possible reusable materials, in processes designed to reduce losses and to produce as little residue as possible. We have an internal recycling program and we work with specialized companies in domain.

The partnerships we have ensure that our suppliers and the local forest industry operate responsibly. We use only materials that comply with the latest standards and regulations in the European Union. Simply put, our panels can have a wide variety of materials and colors, but you can find a little "GREEN" in each of them.

# WE offer

## 01. Services

Decorative Panels Division covers all the project's stages: from the initial design to mass production.

### Design

Starting with the moment you decide on one of the models from in the catalog, we will be happy to evaluate your project, to help you choose the materials and make a correct price quotation.

### 3D modeling

We can help you define your Project. Together with our team of engineers and designers, you can discuss everything: from creative options, to functionality, color details or final touch. Upon request, we can deliver realistic 3D renderings, so that the product in question can be carefully studied.

### High precision production

We will discuss all options you have in terms of materials available for the Project. All the materials we are high quality and they are supplied from well-known international providers.

## 02. Design

### Engineering

When using Decorative Panels, our Engineers make a good team with any Architect or Designer coming from The customer. If you don't have a Designer, we also offer consultancy and advice. Customer's opinion and comments and discussions applied to the subject, lead to the improvement of the final result by implementing the required changes. After setting the final details, we can sign a contract to start production.

We guarantee that all Panels produced in large series, meet the specifications of the approved Prototype model.

## 03. Delivery

### Mass production and delivery

Once everything is clearly established, we start mass production. If the Project is extremely urgent we will increase the working personnel, we will work overtime and even on days off, to deliver at the requested term.

However, to make sure everything goes accordingly to your expectations, please keep in touch permanently with the dedicated Project Manager.

### Installation and maintenance

Transport and installation of the Panels for more complicated projects, requires care and expertise. As far as possible, the Decorative Panels Division will ensure the installation of the Project by our Company's resources. In case of long distances, for transport and installation, we work in collaboration with trusted companies.

# Technology

## Tehnologie

We cover the whole range of processing for wood-based materials, Laser cutting or wood engraving, composite materials or metal. **BD Lemntech**'s investments were not only in high-performance technology, but also in the team of engineers and high-skilled workers qualification. The **Decorative Panels Division** is made up of professionals placed in the key points of the production process since the beginning of any project. Each project thus receives a dedicated team consisting of: account manager, project manager and a technical expert.

**Project theme** - We discuss with our Clients, ask questions and gather relevant market information to clarify the topic of the project and develop creative proposals.

**Development** - Our team of engineers and designers collaborates for each project, from the concept phase to the starting of production. Transforming an idea into reality by using appropriate technological solutions is a quality of the team.

**Production** - **Decorative Panels Division** operates in over 10,000 m.p. of production spaces equipped with modern technology, at European level. The production activity is ensured by the use of the most modern equipment. Teams of qualified workers are led by specialized engineers. **BD Lemntech** practices modern and quality management in the process of production, providing information and specialization courses for our staff, as well as qualification on-the-job for newcomers.

**Logistics** - **BD Lemntech** has integrated in the **Decorative Panels Division** information systems for coordinating the internal activity, through which it ensures careful supervision of the production, delivery and maintenance processes. Both locally and across Europe, we make sure we have satisfied customers.

## Certificates

- ◆ **BD Lemntech** has documented and implemented a Quality Management System in accordance with the requirements of the reference Standards SR EN ISO 9001: 2015.
- ◆ **BD Lemntech** has documented and implemented an Environmental Management System in accordance with the requirements of the reference Standards SR EN ISO 14001: 2015.
- ◆ **BD Lemntech** has documented and implemented a Occupational Health and Safety Management System in accordance with the requirements of the Reference Standards SR EN ISO 45001: 2015.
- ◆ **BD Lemntech** is an FSC accredited company with the SGSCOC-Certificate 010906 FSC A000522.
- ◆ **BD Lemntech** products are made from materials that meet the FSC operating conditions of responsible forestry.
- ◆ **BD Lemntech** is SEDEX and ECOVADIS accredited company.

# Materials

## Diversity

- Natural wood veneer; the texture and finish of the veneer varies depending on how the board is cut, as well as the wood species used.
- Painted surfaces; available in any desired color (according to RAL, CMYK or Pantone encoding)
- Natural plywood that can be painted or varnished with stain in any shade; keeps the texture of the wood visible.
- Natural MDF, ready to be varnished or painted.
- For Exterior you can choose for HPL, Aluminum or Steel.

### Plywood

- Sheet thickness: 6-15mm
- Sheet size: 1525x1525mm / 1250x2500mm
- Finishes: transparent lacquer; patina; stain; RAL / NCS colors
- Use: indoor / outdoor

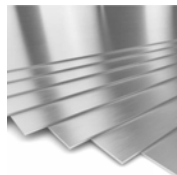

### Aluminium

- Sheet thickness: 2-10mm
- Sheet size: 1000x2000mm / 1250x2500mm / 1500x3000mm
- Finishes: electrostatic painting - RAL / NCS colors
- Use: indoor / outdoor

### MDF

- Sheet thickness: 3-30mm
- Sheet size: 2070x2800mm / 2130x3050mm / 2190x1840mm
- Finishes: transparent lacquer; RAL / NCS colors
- Use: indoor

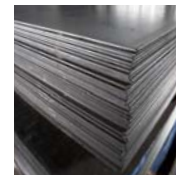

### Stainless Steel

- Sheet thickness: 2-10mm
- Sheet size: 1000x2000mm / 1250x2500mm / 1500x3000mm
- Finishes: electrostatic painting - RAL / NCS colors
- Use: indoor / outdoor

### HPL

- Sheet thickness: 6-12mm
- Sheet size: 3660x1830mm / 3050x1300mm / 2440x1220mm
- Finishes: RAL / NCS colors, various laminated decors
- Use: indoor / outdoor

### Steel

- Sheet thickness: 2-10mm
- Sheet size: 1000x2000mm / 1250x2500mm / 2000x3000mm / 1500x3000mm / 2000x4000mm
- Finishes: electrostatic painting - RAL / NCS colors
- Use: indoor / outdoor

## The choice belongs to you

You can consult the [Decorative Panels Team](#) in order to choose the materials most suitable for your project: MDF, raw chipboard, plywood, composite materials, bond type metal panels; they all have specific features.

If you want materials but you cannot find them in our list, we can test together if they can be cut on CNC or laser machine.

Upon request, depending on each material, we have the possibility of supplying the sheets in different sizes.

# and COLORS

## Painting class today

- Colors that fit your vision perfectly. This is what we offer. We can paint your panels in over 3000 shades according to RAL or NCS color cards. If you do not find the right color in the sample cards, we can always discuss another choice, upon request. Ask for the help of the Deco Panels team.

# Various Applications

## An overview of Decorative Panels

Decorative Panels are always in fashion! Here you will find the latest trends, the most sophisticated textures, vibrant colors and innovative design for your projects.

Creativity and innovation are the basis of our collection of models, from which you can choose by consulting this Catalog. By adding special materials available in various sizes and thicknesses, you have a complete range of solutions to turn your ideas into art.

### INDOOR APPLICATIONS:

- Decorating hotel interiors, offices or apartments / houses
- Wall cladding / Acoustic panels
- Ceiling claddings
- Partition panels / Room partitions / Railings
- Decorative screens and Shades
- Decorative headboards
- Decorative shelves for shops
- Radiator masks, radiators, AC
- Decorative furniture
- Applications for HoReCa
- Decorative items / Special gifts (paintings, frames, trays, jewelry boxes, lampshades, napkin holders, etc.)

### OUTDOOR APPLICATIONS:

- Decorating the exterior terraces of hotels, building offices or apartments / houses
- Ventilated facades
- Decorative panels for windows / balconies
- Railings
- Fence panels
- Pergolas and parasols
- Separator panels in gardens / pools / yards

# interior

Interior Design

with a dash of

**uniqueness**

If we talk about interior design, the applications of Decorative Panels are limited only by our own imagination. Versatile and lightweight, Decorative Panels can mark creatively the interior space partitioning.

In “open space” type offices, restaurants or large halls, you can separate the areas using lightweight perforated modular structures, their appearance is in accordance with the theme of the arrangement of the place. Also “home” you have the same interesting options: whether you want to tile a wall, to install a railing or a sliding door or to separate the Kitchen from the Living Room, choose the solution of Decorative Panels.

Here are some examples ...

# Room dividers and Wall cladding

*Can't find exactly what you're looking for? Contact our team and you will receive customized solutions that will suit your Project.*

## The lace house

### BACKLIGHT CURVED DECORATIVE PANEL

A push of the technical possibilities to the extreme. A fine, Japanese-inspired model (Sakura Flower) covering the backlit material creating a special effect.

### DOOR PANELS

We find the same model framed in the upper panel of the door, masking the air conditioning grille. Thus, the two distinct elements are compositionally linked through the decorative panel used.

### FUSION IN COMPOSITIONS

Architecturally speaking, they are different objects as destination, yet they are linked by using the same motifs, symbols or finishes. The model creates a special atmosphere. The Japanese inspiration reminds of "Minka", the word used in the Land of the Rising Sun for "home" - where the Kanso harmony rules (the Japanese word for Feng Shui).

- Location - Private home Bucharest
- Project Name - Obol House
- Material - curved veneer and backlit veneer
- Model Panel - Sakura Flower

## Staircase Separator Panels

### STAIRS SEPARATION PANELS

A functional geometric masking of the stairs. The passage from the living area for guests, to the private area of the bedrooms located upstairs, is done gradually, the delimitation created suggesting a space for tenants.

- Location - Private residence
- Project Name - Fine Delimitation
- Material - 40mm MDF
- Model Panel - Geneva
- Finishing / Technology - Laser cutting, RAL painting

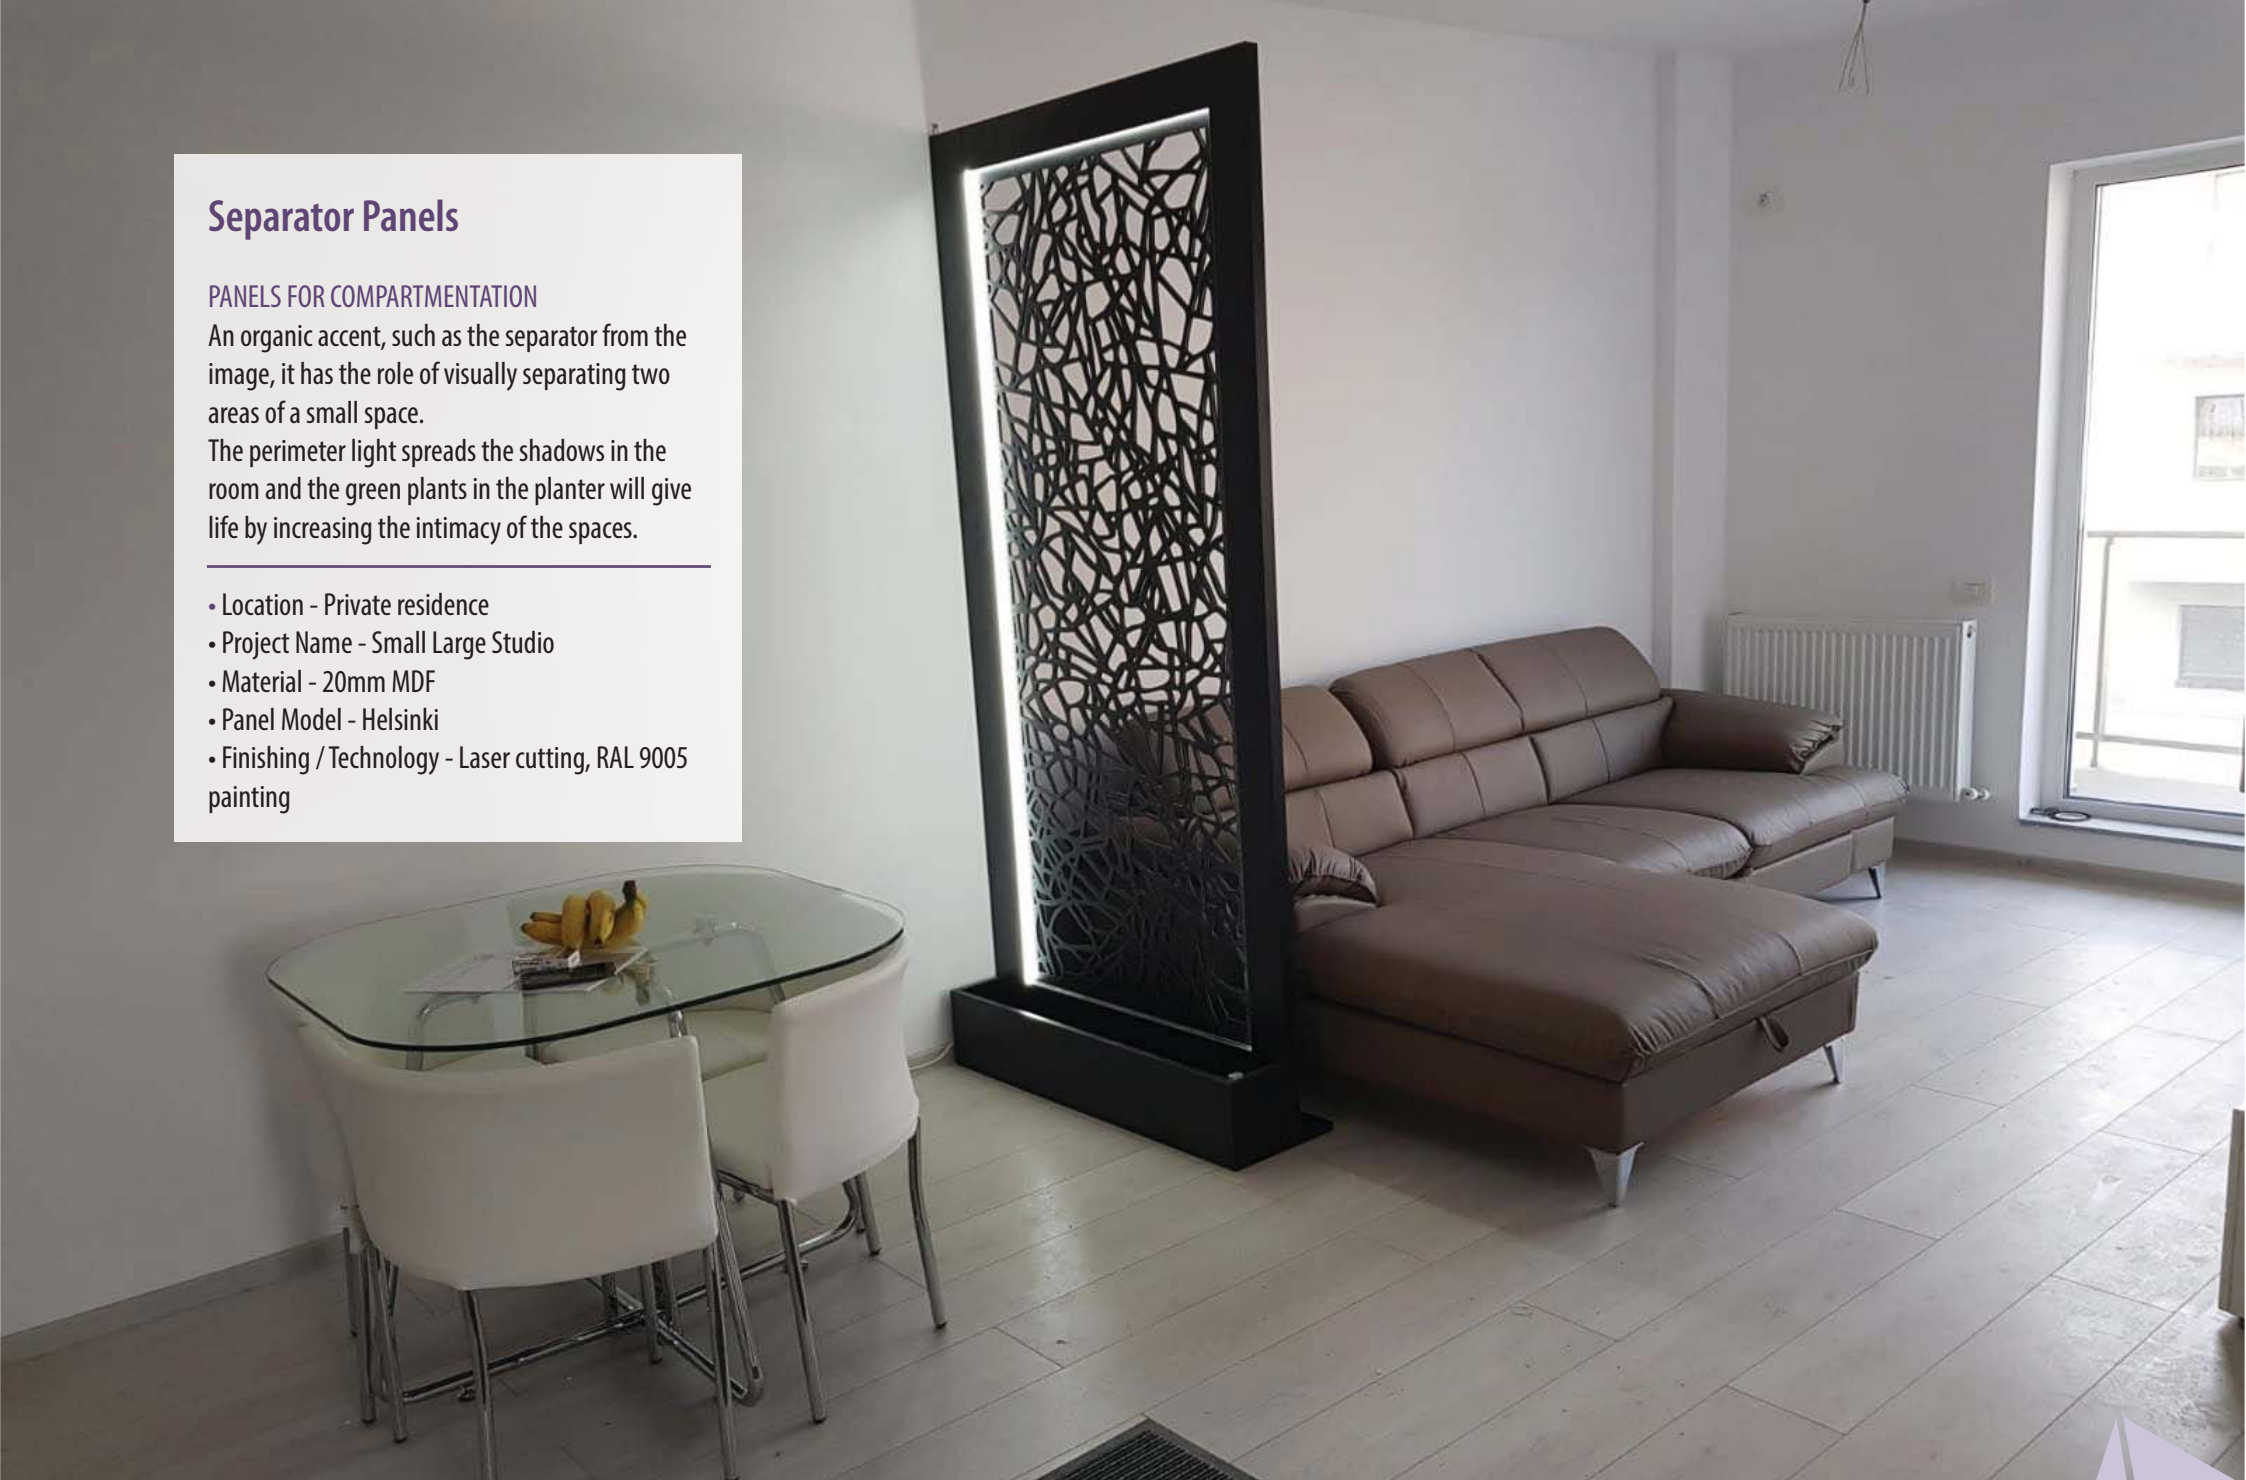

## Separator Panels

### PANELS FOR COMPARTMENTATION

An organic accent, such as the separator from the image, it has the role of visually separating two areas of a small space.

The perimeter light spreads the shadows in the room and the green plants in the planter will give life by increasing the intimacy of the spaces.

- Location - Private residence
- Project Name - Small Large Studio
- Material - 20mm MDF
- Panel Model - Helsinki
- Finishing / Technology - Laser cutting, RAL 9005 painting

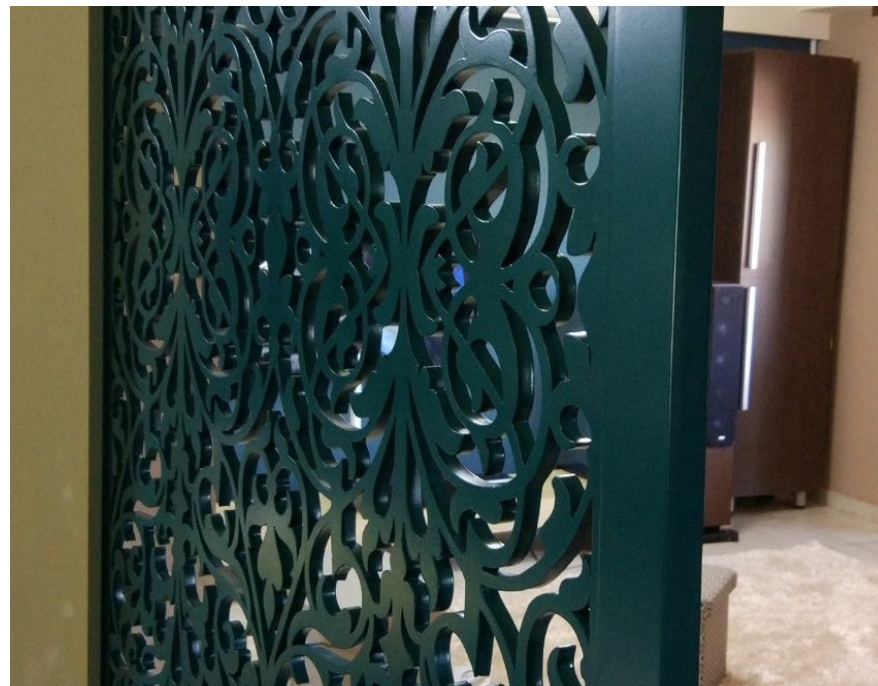

## Sliding Door Panels

### DOOR PANELS

The modular delimitation of the spaces with the help of sliding doors does not surgically separate the rooms but creates intimacy while maintaining the whole perception of the whole volume.

- Location - Private residence
- Project Name - Sliding Lace
- Material - 20mm MDF
- Panel Model - Geneva and Damask Ornament
- Finishing / Technology - Laser cutting, RAL 6005 painting

## Separator Panels

### COMPARTMENT PANELS

Starting from the scope and architecture of the spaces that are being separated with the help of sliding doors, the chosen model can be a visually permissive geometric or it can become one of organic inspiration with a fine, discreet structure.

- Location - Private residence
- Project Name - Flow
- Material - 8mm MDF
- Panel Model - Flowing River
- Finishing / Technology - Laser cutting, RAL 9003 painting

## The ideal compartmentalized space

### ATTIC COMPARTMENTATION

An ungenerous attic gains value through a unique separator. In addition to creating two visually “airy” rooms, the result is a space that speaks of the 21st century in conjunction with a classic finishing method: rustic paneling.

### FLUENCY

The use of decorative dividers in such a space reduces the visual “weight” of a frame, the rooms thus formed, communicating.

### ORIGINALITY AND TRADITION

The method chosen with care by the architect creates intimacy and multiple destination for the spaces.

The frame is no longer oppressive but integrates with the compartments reversing the passage of light from space horizontally.

- 
- Location - Private residence
  - Project Name - Men's Cave
  - Material - 12mm MDF
  - Panel Model - Prague
  - Finishing / Technology - Laser cutting, RAL 9016 painting

### “Complete Round” Project

As a first eye contact when walking on the generous stairs, the wall had to be approached in a memorable manner. The choice was to place a discreet, repetitive pattern that would not detract from the authority of the golden columns that guard the floor but still raise the level of the perceived finish.

The discreet back highlights emphasize the architectural decision both in terms of light details and also they add value to the golden imposing columns.

## Applications within a common project

### UNION IN EXECUTION

Linking the space through repetitive motifs imprints the architectural intention emphasizing its direction and unity.

### HEATING MASK PANELS / BALUSTRADE

Few architectural solutions offer the versatility given by decorative panels. The same model present in the context of a separating railing, discreetly applied on a window but also masking the steel radiator, brings together these such different objects.

### SYNERGY

If standardized solutions would have been used for each of these applications, there would have been no synergy of space, as it is no longer perceived as a unitary look.

- Location: Private residence in Dămăroaia
- Project name: Complete Round
- Material: MDF 19mm mahogany
- Panel model: Seven Treasures
- Finish / Technology: Laser cutting, mahogany wood

## Classic elegance

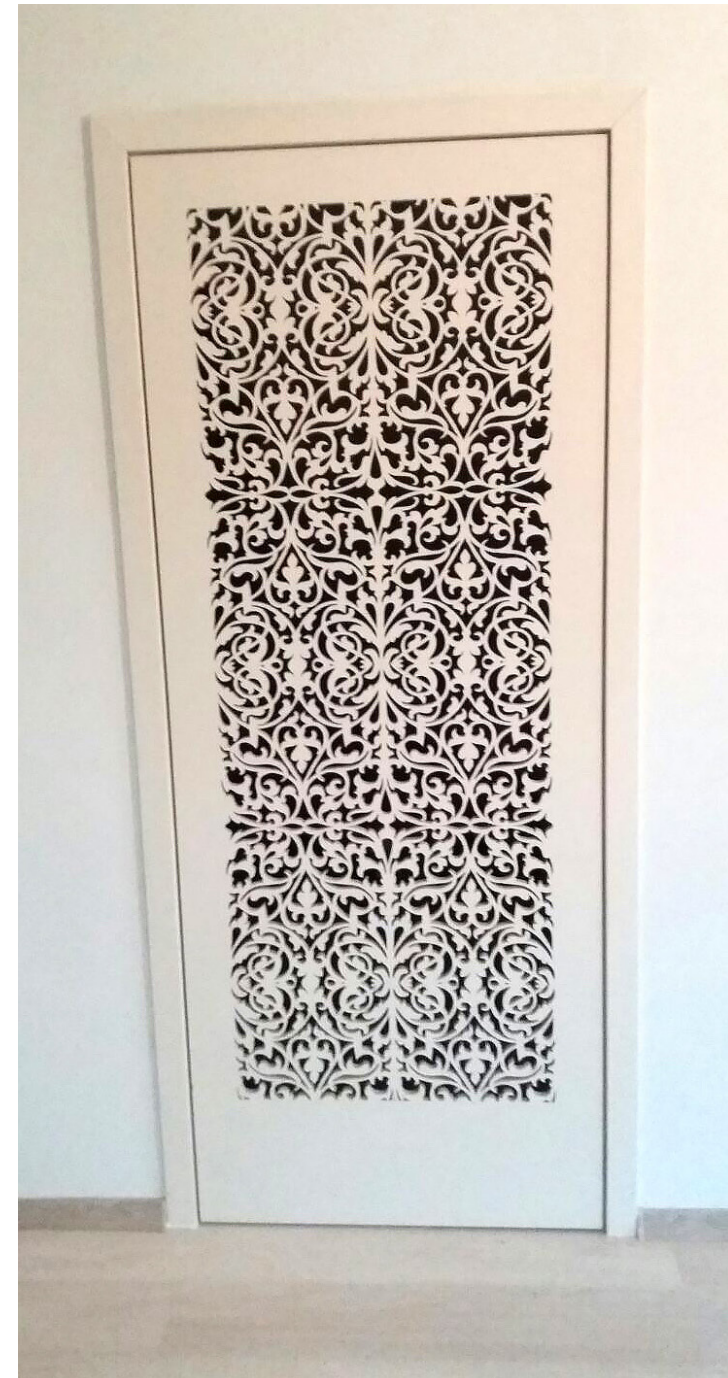

### LACE PANELS

A fine wooden lace present as a leitmotif of intimacy in several poses.

First masking the stairs leading to the bedrooms of the tenants - the most private space in a house. Then separating the children room, the chosen element also helping the need to concentrate during the study.

At the end, masking the entrance to the closet, as a door - the message being that the lace details belongs to the space of the house, the privacy of the closet being maintained.

- 
- Location - Private residence
  - Project Name - Dantellium
  - Material - painted MDF 18mm
  - Model Panel - Damask Ornament
  - Finishing / Technology - Laser cutting, RAL 9010 painting

# HoReCa Indoor

*Arranging the interior of a select room depends on the designer's ability to creatively manipulate Light and Shadows, Functionality and Space.*

### “The Bridge” Project

Unlimited customization.  
Our standard is that there is no standard.  
Defining elements of any “custom” arrangement.

These principles were also present in the arrangement of “The Bridge”, a project in which the accents given by the decorative panels compensated a standardized furniture or finishes, adding uniqueness to the space.

## A bridge of Gastronomic Friendship

### BAR PANELS - with lighting.

The central point of the arrangement, the Bar, was designed from standard materials, keeping as a “wow” factor the beautiful composition of decorative organic panels. taking advantage of the RGB lighting, they transform the space with each change of color of the light.

### WALL COVERING PANELS - with lighting.

An inexpensive solution, the emphasis given by a decorative panel placed on a wall is a special architectural effect.

### PARTITIONING PANELS - with lighting.

By choosing a thematic model in tone with other accents of the space, the design becomes unitary and the room “vibrates” in the same rhythm.

This look is much more important in the case of hosting events in these spaces, as there are no “dead corners” where the light and ambiance are poorer, the concept being an unitary one.

- Location: Reastaurant in Bucharest
- Project Name: The Bridge

- Material: MDF 12mm
- Panel Model: Gornergrat Panel Model
- Finish / Technology: Laser cutting, RAL painting / staining

### “KAIAMO” Project

When one of the associates of the Kaiamo restaurant called us, he told us that he was in London at a very well known restaurant, Gaucho. He had seen there a model of separator that he had found very interesting and he was skeptical that he would find a company in Romania to produce it. He was astonished when I told him that we had produced that separator at the London restaurant. So things went further by themselves...

## Kaiamo intimacy

### PARTITIONING PANELS

A very inspired model that offers a gradual intimacy to the guests. The feeling of space is preserved and the light passes freely through the generous cutouts, but at the same time, the panels become more opaque at the bottom to create intimacy.

### PANELS DIVIDED BETWEEN TABLES

The white color and texture of the paint allows the panels to absorb the inflections of the surrounding elements and to integrate into the space.

Whether we are talking about the color given by Edison bulbs, or about the light reflected by the oak table, it seems that fragments of the personality of these elements are infused by the partition panels.

- Location: Reaaurant in Bucharest
- Project Name: Kaiamo

- Material: MDF 6,18,30mm
- Panel Model: Walensee / Murtensee / Rhein
- Finish / Technology: Laser cutting, RAL 7004 painting

**“Scented Showcase Design” project**

Romance, exuberant flowers, geometric patterns. When we talk about fashion & lifestyle, the arrangement of showcases with details and contrasts of styles highlights the avant-garde approach of fashion designers such as Alexander McQueen, Christian Dior, Balmain, Balenciaga or Stella McCartney.

# Integrated Panels

*Environmental design in pure form - Perforated Decorative Panels inserted in furniture elements, unleash your imagination.*

## Project “New York Kitchen”

Open space arrangements are a growing trend in modern apartments. The kitchen is integrated into the living space and becomes one of the most used spaces in modern homes.

The separation of the kitchen area with the New York pattern in shades of metallic gray creates an interesting contrast with the warm shades of cherry wood.

## Integration with Lighting

### RETRO-LIGHTING PANELS

The integration of lights in the furniture provides living spaces intimacy and warmth. The decorative panel becomes an art object by itself, highlighted by the light placed behind the model.

### BACKGROUNDS OR SHOWCASES

You can transform any piece of furniture using decorative panel patterns as background accents or even as central elements.

### UNIQUE FURNITURE

Customizing furniture can be made much easier. The range of models and various shades offers you the opportunity to have a unique furniture, made by yourself. Challenge your creativity!

- 
- Material - various materials available; see catalog
  - Panel Model - consult the catalog
  - Finishing / Technology - Laser cutting, RAL painting or staining / varnishing, as appropriate.

## Furniture for shops

### ILLUMINATED AND PERSONALIZED SHOWCASES

Fine details, complex patterns, directional lights, color accents. Personalized furniture highlights the displayed products.

### ENVIRONMENT AND BRANDING

The projects of arranging the spaces in the shops are made by designers and architects, starting from the image of the brand but also respecting the finest details.

### BOUNDARY PANELS

Separating presentation areas using decorative panels is a modern and innovative solution for integrating design and functionality.

- 
- Location - Presentation shops / Specific furniture
  - Material - various materials available; see the catalog
  - Panel Model - consult the catalog
  - Finishing / Technology - Laser cutting, RAL painting or staining / varnishing.

# Railing Panels

*Love at first sight? A special railing can give the aesthetic rhythm of the room. That's what Decorative Panels can do.*

## Obol House

### RAILING PANELS WITH GLASS INSERT

An original solution that shares the functional advantages of two materials. Glass is used in this context as a resistance structure for the transparent wooden coating. Thus the execution is airy and creates space in the given context. At the same time, the use of massive elements due to technical or filiform constraints, without personality, was avoided.

### WALL COVERING PANELS

The category of decorative panels also includes the architectural cladding of the walls. The “cantilever” staircase, as a central element of the house, benefited from a volumetric composition characterized by complication and refinement of expression. Coming from distant Africa, the Black Ofram veneer recomposes on the wall the trunk of the tree from which it was chosen, its fiber continuing throughout the composition.

The execution of this “center piece” of the house involves a high degree of difficulty and complexity.

- 
- Location - Private home, Bucharest
  - Project Name - Obol House
  - Material - MDF, Veneer, Plywood
  - Panel Model - Prague
  - Finishing / Technology - Laser cutting, RAL painting, staining natural colors, transparent satin lacquer

## Little Boat

### RAILING PANELS WITH ROMANIAN PATTERNS

The apartment building is located in a context dominated by blocks of flats from the communist period and the presence of the ruins of Assan's Mill. The Little Boat is a declaration of modernism combined with traditional elements in an aesthetic but especially functional symbiosis.

### UNIQUE STYLE

An element of style and tradition highly appreciated by both clients and professionals in the field are the Balkan motifs that have been successfully integrated both on the facade and in the common interior spaces. Respecting the cultural heritage in a modern interpretation, the elements with traditional motifs were ingeniously integrated on the facade, covering the air conditioners and applied on the railing and decorations inside.

### ORIGINALITY AND TRADITION

The intention of the architects was to remind the inhabitants of the building, to the people from the neighborhood or to the passers-by, the Romanian cultural specificity. One Neighboring with an old communist look, Little Boat breaks the visual monotony. Concern for cultivating a certain lifestyle and for the quality of living in common is fully visible and inside, starting with the staircase, where we find the decorative perforations.

- 
- Location - Bucharest
  - Project Name - Little Boat
  - Material - MDF, Aluminum
  - Panel Model - Traditional, Unique original design
  - Finishing / Technology - Laser cutting, RAL painting

## PROJECT DESCRIPTION

### RAILING PANELS

Beautiful houses, original people. As a combination between classic and modern, between aesthetic and functional, the railings in the images bring our innovative solutions in classic arrangements.

### CHOICE OF MODELS

The chosen model talks about the personality of the owner. Nature-inspired organic patterns define warm personalities, also the true meaning of home, while geometric patterns speak of the rigorous, firm personalities.

### RELATED APPLICATIONS IN THE SAME FAMILY OF FORMS

In the same direction, at a later stage of decoration, the radiators in the hallway will be covered, giving them personality and integrating them into the concept.

- Location - Private homes
- Material - MDF 30 mm
- Panel Model - Prague/Kabuki Dance
- Finishing / Technology - Laser cutting, RAL painting or staining, depending on the Customer's preferences

## RAILING PANELS FOR THE STAIRCASE HOUSE

So beautiful with so little. Here is how an accent can transform the closed and monotonous stairwell space into a neat space, treated with care and respect for those who will use it.

The staircase can be seen as an allegory, some going up, while others descend. Its personality is given by the chosen solutions. Like life, it is littered with ups and downs, but the context in which they happen is important.

# Masking Panels

*Unesthetic radiators, storage units or odd places without a certain function, can easily be hidden using a masking panel.*

## Radiator Masking Panels

### MATERIAL DESCRIPTION

We use durable materials that allow uniform heat distribution.

Vibrant colors, pastel shades, wood textures, metallic accents, unique design.

### APPLICATIONS RELATED TO THE SAME MODEL

The arrangement of a space can be done using the same model for all elements - from radiators, air conditioners, boilers, to fan coils and other installations that can be integrated into a compact and unitary design.

### INTEGRATION INTO THE CONCEPT OF ARRANGEMENT

Unique solution for integrating all appliances in the house in an elegant and modern way, using decorative masking panels.

## Covering panels

### HEATING SYSTEMS COVERING PANELS

The apartment heating system unit is integrated in a body with a delicate Moorish-inspired pattern. The mask has a service access door.

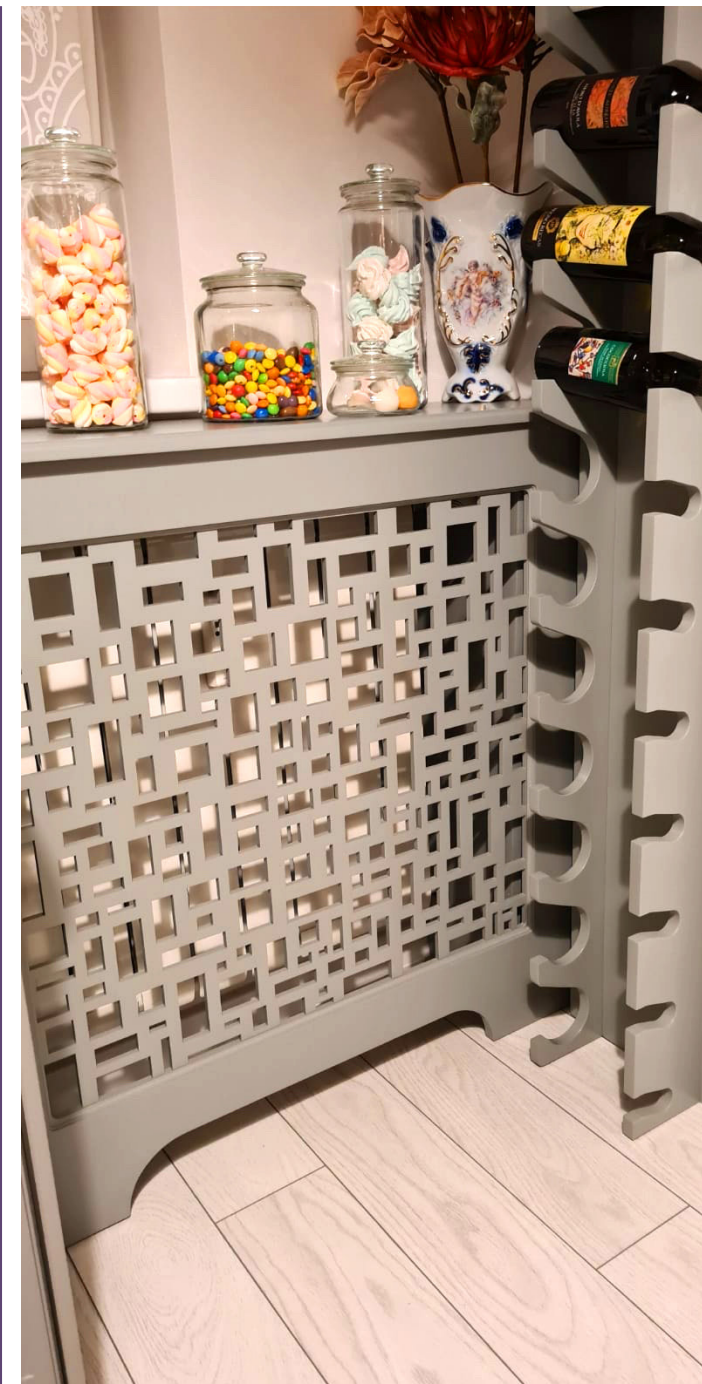

### RADIATOR COVER GRID

The Barcelona model represents a stylization of Gaudi's mosaics. Rectangular shapes of various sizes create a uniform geometric pattern.

### AIR CONDITIONING COVERING PANEL

In addition to the special aesthetic aspect, masks for air conditioners can also have a functional role of directing the air flow.

- 
- Location - Inside in bathrooms, kitchens, hallways, house stairs and closets
  - Material - MDF different thicknesses
  - Panel Model - consult the catalog
  - Finishing / Technology - Laser cutting, RAL painting

## Fan coil grilles

### MATERIAL DESCRIPTION

The grilles for covering the fan coils are made of parquet slats identical to the rest of the floor, thus maintaining visual continuity.

### FUNCTIONAL

The grilles allow easy access to the fan coil unit.

### INTEGRATION INTO THE CONCEPT OF ARRANGEMENT

The Asian-inspired model is found in all covering elements in the home: masking panels for the air conditioner, central heating cover and radiator covers.

# at outdoor

A building with a  
lacing facade, looks

**spectacular**

Outdoor Decorative Panels are an extremely interesting option as an aesthetic solution for solving facades.

Whether it's general coverings with perforated decorative panels, wall cladding or just accents of shape and color, architects and designers will consider the potential of Deco Panels for a spectacular decorative look.

# Facade Panels

*By using decorative panels on facades in the form of a composition or as a simple accent, memorable constructions with great visual impact result.*

**BD**  
LEMNTECH

## UNIQUE ELEMENTS FOR FACADE DECORATION

Contouring the compact faceted volume of the building (reminiscent of the front silhouette of a ship) started from an initial cube shape from which portions were asymmetrically cut, the end result being an atypical volumetry that falls within the allocated space and contrasts with the vertical-horizontal duality of the surrounding blocks.

The idea of asymmetry was also preserved at the level of the façade by means of square gaps that have different dimensions and are distributed randomly. Modern and bold as an architectural language, the building also received a traditional, local imprint - a series of perforated panels with Romanian-Balkan-inspired motifs, which personalize the windows.

Moreover, the graphic interpretation proved to be an inspired solution for the practical solution of the location of the outdoor air conditioning units on the facade of the block.

Thus, they were placed in niches with the thickness of masonry and were masked with perforated panels. The intention was to remind the inhabitants of the building, but also the people in the neighborhood or passers-by of the Romanian cultural specifics, but also to break the visual monotony around them.

## Complete project Facade solutions Little Boat

### DECORATIVE PANELS FOR WINDOWS

In a context with major communist reminiscences and at a time when architecture is subject to ubiquitous globalization, the intention is that the residents of the neighborhood and especially those in this area mobile to look at these traditional graphic interpretations, reminding them of their culture.

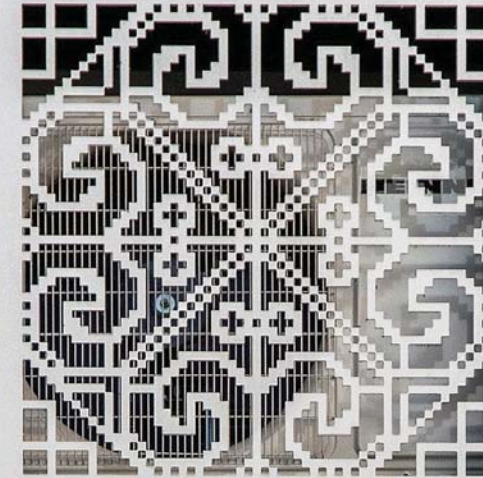

### OUTDOOR AIR CONDITIONING MASK PANELS

In an attempt to solve the problem of placing outdoor air conditioning units on the facade, a prototype solution was chosen in which these equipments were placed in a niche in the thickness of the masonry, masked with a perforated panel with gaps in the form of traditional motifs.

### ABOUT THE PROJECT

The small boat is a declaration of modernism combined with traditional elements, in an aesthetic but especially functional symbiosis.

- Location - Bucharest
- Project Name - Little Boat
- Material - MDF, Aluminum
- Panel Model - Traditional, Unique original design
- Finishing / Technology - Laser cutting, RAL painting

## UNIQUE ELEMENTS FOR FACADE DECORATION

When we say “Decopanel” we do not refer strictly to perforated panels in a multitude of models but we put in the service of quality architecture all our skill and technology that we have so that in the end, the building that benefits from this approach is truly remarkable.

## There is no second chance for a first impression

### CURTAIN WALLS

A reputable cosmetic clinic must inspire confidence from the outset. This is also the case of Swiss Estetix, which chose a fluid solution for treating the façade, made of curved lamellar panels.

### FENCE AND FACADE LAMINATE PANELS

The fence and the facade of the building have the same architectural solution. Thus, the two distinct elements are perceived in a unitary way, emphasizing the belonging of the outer space to the same concept.

- 
- Location - Bucharest
  - Project Name - Swiss Estetix Design
  - Material - HPL 10 mm
  - Panel model - special order, according to the project original
  - Finishing / Technology - Laser cutting, RAL 9016

# Balcony Rails

*Identity and Uniqueness for all buildings! Outdoor cutout Deco Panels may pull out of ordinary any building facade.*

## Outdoor Stair Dressing

### CURTAIN WALLS

An unsightly construction attached to the building but necessary to ensure evacuation in case of fire. A demanding owner who did not want to let the functional stumble from the architectural value of the building. A solution of unconventional masking of the escape ladder from Aluminum panels mounted on a metal structure.

### OUTDOOR RAILS

To harmonize the facade thus created, decorative elements were taken over and extended to the other facades of the building. Thus, the balconies received decorative railings with the same pattern.

- 
- Location - Switzerland
  - Material - Aluminum
  - Panel model - Geneve
  - Finishing / Technology - Laser cutting, RAL painting

## RAILS FOR BALCONIES WITH UNIQUE PANELS

And besides the fact that they look good, they are easy to maintain! They do not rust, do not crack, do not lose their beauty over time.

Decopanel is resistant to weather, ultraviolet rays and extreme temperatures.

What other reasons should you choose for Decorative Panels?

# Gates and Fences

*Character and distinction from the entrance.*

## SEE, WITHOUT BEING SEEN

A primary perception of the interior space is elegantly stopped by the vegetation that runs behind the modernly designed gate.

To give depth to the closing elements of the property, the architect chose a double model. Thus, the geometry of the front panels is different from that of the rear panels, the connection between the two being made through the resistance structure of the gate, elegantly masked in the solid elements of the composition.

## Unitary concept

### GATES

Respect for urbanism and the city transcends the use of transparent elements in all plans, but which are designed to provide privacy to residents.

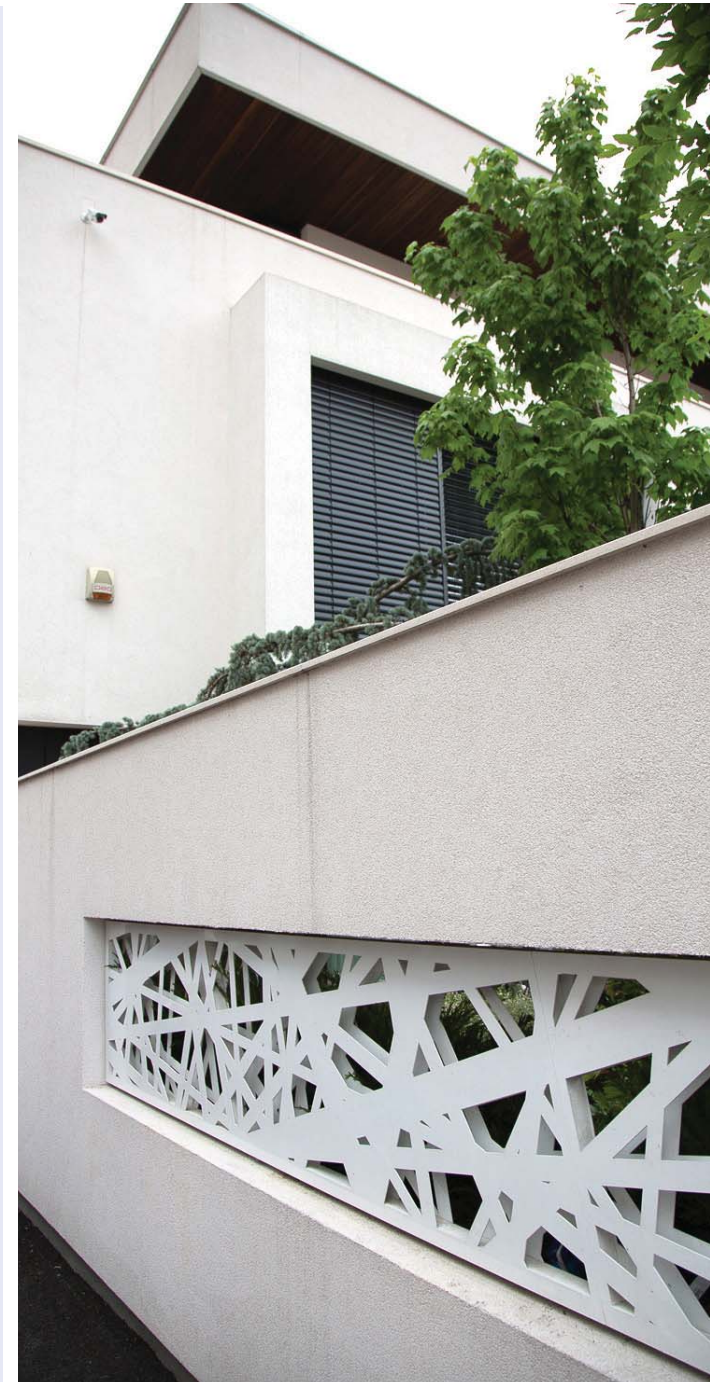

### FENCE INSERTS

To “lighten” the massive monolithic fence, a vegetation insert masked by the doubled decorative panel was designed.

### PEDESTRIAN ENTRANCE

The pedestrian entrance, designed in the same system, opens the property, suggesting to those who cross its threshold that they are welcome wherever they enter.

- 
- Location - Private home, Bucharest
  - Project Name - Obol House
  - Material - Aluminum 3 mm
  - Panel Model - New York
  - Finishing / Technology - Laser cutting, RAL 9016

# House & Garden

*Separator Panels, Pergola Arrangements, Planters and Decorative Tunnels for Pools - elegance and good taste in Outdoor Design.*

## GARDEN ARRANGEMENTS

The shadows created by the game of the sun through the decorative panels placed on a pergola create unique sensations. The shadows change position with the sun and the inside of the pergola changes continuously throughout the day.

Although they allow light to enter, the decorative panels placed on a pergola protect against the aggression of the sun, being an effective shading solution.

## Planters and Separators

### FLOWER SUPPORT GARDENERS

Plants do not grow as soon as they are planted. Until they take over the structure of the planter giving it life, the visual comfort is provided by the decorative panels. Then the panel will support the plants, turning into a living wall.

### SPACE SEPARATORS

An effective way to separate garden spaces. The panels can delimit certain functions of the court, without altering its perception of the whole.

### GRILL PANELS

An important functional role is when you want to “mask” the trash can or grill.

- 
- Location - Gardens, inner and outer courtyards, terraces, playgrounds or public places
  - Material - Aluminum
  - Panel Model - see this catalog
  - Finishing / Technology - Laser cutting, RAL painting

# HoReCa Outdoor

*Arranging a Summer Garden or a Terrace is always an interesting topic and involves choosing special materials.*

MOKI

## Case study: MOKI

### ILLUMINATED GARDENS

By choosing the illuminated planter solution, we managed to create a microclimate for the restaurant terrace, full of light and color. The planters are mobile and the terrace space can be easily reconfigured.

### UNIQUE

Decopanel solutions for HORECA are customizable with the possibility of integrating brand elements in the arrangement of spaces.

### PANELS FOR ZONE BOUNDARIES

Moki is located in an office space. Intensely circulated, without a delimitation, the terrace it would not have given privacy. If an opaque closure had been chosen, it would not have been welcoming. Thus, the Decopanel solution combined both the need for separation and the need for hospitality.

- 
- Location - Restaurant, Bucharest
  - Project Name - MOKI Arrangement
  - Material - HPL 8 mm
  - Panel Model - New York
  - Finishing / Technology - Laser cutting, RAL painting

## Case study: PARTITIONS PEDESTRIAN BOUNDARIES

### SEPARATION PANELS

#### PEDESTRIAN SEPARATION PANELS

The terraces located on the street have their charm. You look at the passers-by while you are at the table with your friends. But the space allocated to a terrace must be delimited and a suitable solution is that of decorative panels. Friendly with the city, they are blended in the urban landscape, but create that fine demarcation line between the terrace and the sidewalk.

### BRANDING STRADAL

The restaurant brand can be cut into the separation panels so as to increase its visibility.

- 
- Location - Exterior, street
  - Material - Aluminum, Steel
  - Panel Model - see this catalog
  - Finishing / Technology - Laser cutting, RAL painting

### SUNSHADES SUSPENDED - LIGHT PANELS

Friendly shadow games, sun protection: another context in which DecoPanels solutions can be used successfully.

The light decorative panels are used especially in applications where the supporting structure is not strong enough to support heavier materials, but an aesthetic shading solution is desired.

Thanks to the transparent structure and constructive characteristics, the light panels are resistant to wind and weather.

# COLLECTIONS

Your Style defines  
your own  
**choice**

When you know what you like, it's easy to choose.

However, when you have so many options in models, it seems that all your imagination expands and suddenly, the choice becomes more difficult. That's why we, the Decorative Panels Team, are here to help you with tips and suggestions for materials, colors or final assembly.

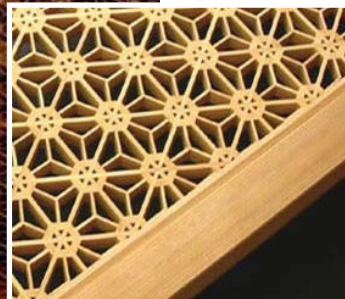

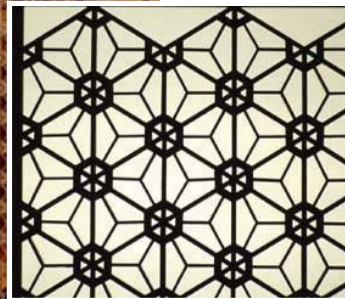

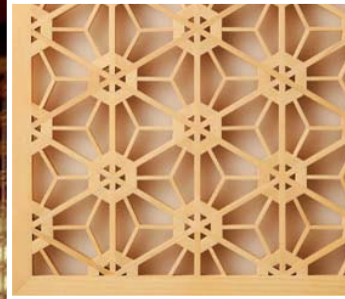

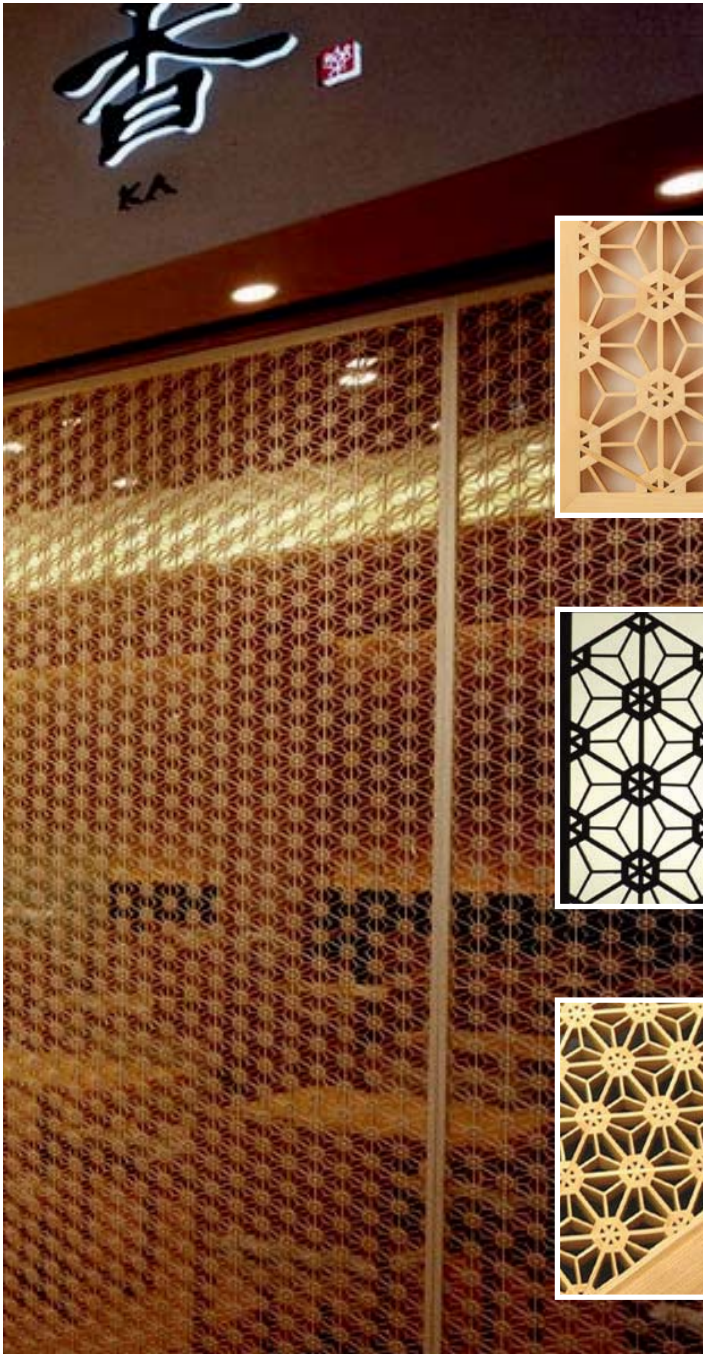

*Sakura cherry blossoms, sesame seeds, tea leaves, patterns reminiscent of hemp leaf structure, flowing rivers, or brocade, sayagata or famous haiku fabrics - our collection of wooden panels inspired by Chinese and Japanese traditions bring beauty and balance everywhere.*

# Asiatic

# Sakura Flower

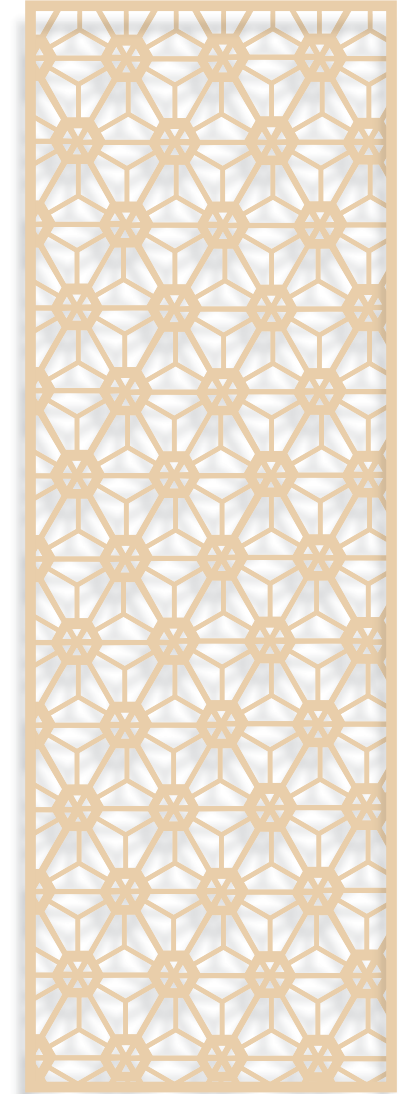

The cherry blossom is a common decorative theme in Japanese culture and art. This model with fine cuts portrays the delicate cherry blossom, Sakura, for which in Japan is one of the largest dedicated celebrations.

To configure a Sakura Flower panel adapted to your space, access the online product configurator.

ASIATIC - SAKURA FLOWER - DECO 001  
**COD 41001**  
**CATEGORY 4**

- Materials and finishes available for INTERIOR Decorative Panel: MDF, Plywood, Veneer, Painting.
- Materials and finishes available for EXTERIOR Decorative Panel: HPL, Aluminum, Steel, Painting.
- For the implementation of your project, contact our Team.

# Kabuki Dance

Kabuki dance is known for its stylization in the theater and for the elaborate make-up worn by some of the performers. Traditionally, the costumes are ample, giving dancers freedom of movement. Copying the movements of the artists, this model represents swirls of dresses.

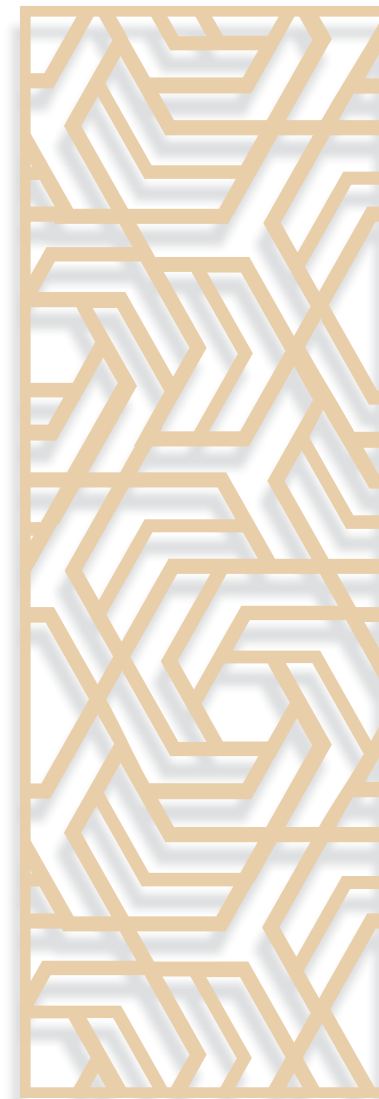

To configure a Kabuki Dance panel adapted to your space, access the online product configurator.

ASIATIC - KABUKI DANCE - DECO 002

**COD 41002**

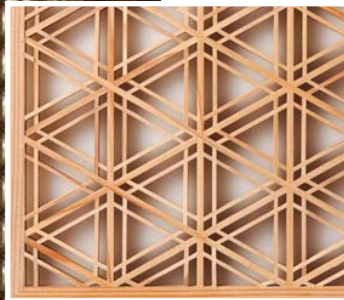

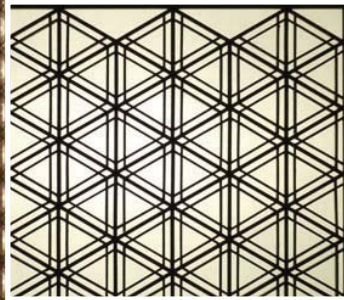

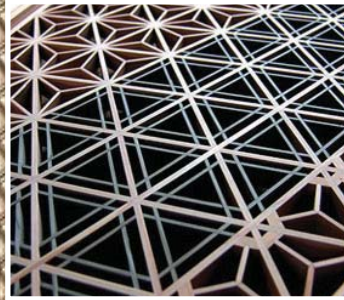

**CATEGORY 4**

- Materials and finishes available for INTERIOR Decorative Panel: MDF, Plywood, Veneer, Painting.
- Materials and finishes available for EXTERIOR Decorative Panel: HPL, Aluminum, Steel, Painting.
- For the implementation of your project, contact our Team.

# Sesame Seeds

In Oriental culture, sesame seeds are known for their health benefits. Decoratively styled, they can form an elegant repetitive pattern, suitable for decorative panels in living rooms and bedrooms.

To configure a Sesame Seeds panel adapted to your space, access the online product configurator.

ASIATIC - SESAME SEEDS - DECO 003

## SWISS COLLECTION

The Swiss collection reminds us of the country where time flows in harmony with people and nature. The beauty of the Swiss cantons, the grandeur of the mountains and the tranquility of the lakes bring an elegant aesthetic balance in the models of the collection.

Made with the precision of watchmakers, with the preciousness of jewelers and with the efficient planning of bankers, the Swiss Collection panels give a delicious touch to the designs, just like chocolate. Enjoy these interesting models!
